

revolutionizing sample processing

First diagnostic device developed by partnering company including AcouSort's acoustofluidic technology receives FDA approval

Visit to the US including several demonstrations and participation at the NIH Research Festival to market the new and improved AcouTrap 3 system

Test system for automated processing within cell therapy delivered to partner company for continued internal product development

Q3

INTERIM REPORT
JANUARY 1-SEPTEMBER 30, 2023
ACOUSORT AB (PUBL)

Summary of the interim report

SIGNIFICANT EVENTS DURING THE THIRD QUARTER

- On July 5, AcouSort announces that the cell therapy collaboration with a leading global life science company continues to expand. The partnering company has ordered an evaluation setup with the aim to in more detail explore the robustness and adaptability of AcouSort's AcouWash technology.
- On August 7, AcouSort announces that the company has been invited to give a lecture at the Acoustofluidics conference, an international event gathering researchers working with all different aspects of acoustofluidics and its applications within life sciences.
- On September 1, AcouSort announces that the company has delivered an AcouTrap system to Karolinska Institutet to be used for automated isolation and wash of stem cells as part of the successful IndiCell project.
- On September 14, AcouSort announces that the company has been selected to participate in the yearly NIH Research Festival arranged by the prestigious American National Institute of Health (NIH).
- On September 29, AcouSort announces that the company will exhibit and present its technology in two poster presentations at the international conference μTAS 2023.

SIGNIFICANT EVENTS AFTER THE END OF THE PERIOD

- On October 16, AcouSort announces that the company has delivered a test system for automated cell handling within cell therapy as part of the company's collaboration with a global life science partner. The partner will now evaluate the system and investigate a potential integration into their new cell therapy production system.
- On October 25, AcouSort announces that the company has published proof-of-concept data demonstrating that the newly developed high-throughput test system meets important requirements for cell therapy applications.

FINANCIAL SUMMARY

The "Company" or "AcouSort" refers to AcouSort AB (publ) with corporate registration number 556824-1037.

Third quarter 2023 for the Group

- Net sales amounted to SEK 1,121,000 (326,000)
- Result before tax amounted to SEK -4,303,000 (-4,250,000)
- Result per share* was SEK -0.33 (-0.32)
- Equity ratio** amounted to 53% (89%) on September 30, 2023

Third quarter 2023 for the Parent company

- Net sales amounted to SEK 1,121,000 (326,000)
- Result before tax amounted to SEK -3,609,000 (-4,219,000)
- Result per share* was SEK -0.27 (-0.32)
- Equity ratio** amounted to 61% (89%) on September 30, 2023

* Earnings/loss per share: Profit/loss for the period divided by 13,202,285 shares. In the year-earlier period, the company had 13,202,285 registered shares.

** Equity ratio: Equity divided by total capital.

NOTE TO THE READER

Amounts in parentheses refer to corresponding period of the previous year.

This document is essentially a translation of the Swedish language version. In the event of any discrepancies between this translation and the original Swedish document, the latter shall be deemed correct.

AcouSort at a glance

AcouSort is an innovative medical technology company developing critical components for instrumentation used in the diagnostics, analytics, and cell therapy processing markets. AcouSort's components allow for automated refinement of biological samples such as blood or cell preparations, providing instrumentation manufacturers with a state-of-the-art ability to integrate sample processing steps that traditionally have to be performed manually.

OUR VISION & MISSION

Our vision is to improve healthcare impact and save lives across the globe by enabling more and better healthcare, faster! Our mission is to lead and drive the development and implementation of a new gold standard for automated sample preparation in clinical research, diagnostics and therapeutics. By providing solutions that radically change the way healthcare is provided today, we remove the bottlenecks for tomorrow's standard of care.

To realize our vision, AcouSort's main goals are:

- Support biomarker discovery and diagnostic assay development for critically ill patients with high sense of urgency
- Enable significant growth of the point-of-care market across healthcare sectors
- Streamline and automate cell processing to allow cell therapeutics to become broadly accessible
- Stay in the forefront of the acoustofluidics technology by continuously engaging in R&D activities

By pursuing these goals, AcouSort aims to become the leading supplier of acoustofluidic sample preparation solutions for the healthcare market.

OUR STRATEGY & BUSINESS CONCEPT

AcouSort's strategy is to use our innovative technology to revolutionize today's healthcare by providing a solution to automate and integrate sample processing steps, allowing for a new generation of medical devices to be developed. Through collaborations with leading Life Science companies our integrated technology will eliminate manual handling steps while saving time, money, and ultimately – lives.

Our commercialization strategy builds on our validated OEM business model offering sample preparation modules and solutions to providers of Life Science research instrumentation, diagnostic equipment, and therapeutic systems. Through close collaborations we develop customized solutions tailored to our partner's needs. AcouSort holds an ISO13485 certificate for the design, development, and manufacturing of components for the Medical Device industry.

To simplify evaluation of the technology, we have integrated our OEM components into user-friendly benchtop systems serving as innovation platforms for our partners. The systems are also used for sample preparation within research and assay development.

OUR TECHNOLOGY

AcouSort's core technology is acoustofluidics – a combination of sound waves (acousto) and microfluidics. Microfluidics allow for precise control of liquids while acoustics gives us the ability to move particles of different biophysical properties. By combining the two technologies, we have the unique ability to move target cell types from one liquid to another. This allows us to fractionate the different components in a blood sample, isolate extracellular vesicles or wash cells to remove contaminants, without having any physical contact with the sample. As the technology is gentle and rapid, it provides a competitive alternative to conventional processing techniques such as centrifugation or filtration. By using acoustofluidics, AcouSort can streamline sample processing for a wide range of applications – from biomarker discovery in basic research, to preparation of clinical blood samples prior to analysis, or sample purification in cell therapy manufacturing.

AcouSort's core technology builds on more than 20 years of acoustofluidic research and development headed by Thomas Laurell, professor at Lund University at the Department of Biomedical Engineering and co-founder and board member of AcouSort.

CEO COMMENTS

Strategic break-through is coming closer

The third quarter of 2023 proved to be yet another quarter of intense activity and significant progress in our key commercial areas diagnostics and cell therapy. Total income in the quarter amounted to SEK 2.16 (1.33) million. For the first nine months of the year, total income amounted to SEK 9.37 (5.82) million, corresponding to a growth of 61% compared to last year.

DIAGNOSTICS – WE ARE CLOSE TO ACHIEVING A STRATEGIC GOAL

AcouSort's ultimate strategic goal is to become an OEM partner to leading life science companies. We are now close to achieving this goal with a partner active within the diagnostic field. Our technology has successfully been integrated in our partnering company's new diagnostics system, which received FDA approval earlier this year. AcouSort will report on all further progress in this very exciting project.

Strategic collaboration with academia. In the quarter, we saw a continued growing interest for our benchtop research systems, and in September, we delivered an AcouWash system to the Faculty of Medicine at the University of Porto, Portugal. This placement was the fifth AcouWash system placed this year. The AcouWash system delivered to Portugal will be used in a research project which aims to develop new methods to isolate, detect and characterize cancer cells in urine samples, which in turn may be an important step towards developing novel diagnostic tools.

CELL THERAPY – COLLABORATION REACHES SIGNIFICANT MILESTONE

In October, our collaboration with a global life science company reached a significant milestone with the delivery of a test system for cell therapy processing. The system is operating according to the partnering company's requirements with the intention to be integrated into a new automated cell therapy production system designed by our partner. The potential integration of our technology into the new cell therapy production system will now be evaluated. Over the coming months, AcouSort will continue discussions with the partnering company to define the next steps of the collaboration. The continued collaboration constitutes a very important step towards the development of OEM compo-

nents to the partnering company's future cell therapy products and instruments.

Strategic collaboration with academia. Since 2021, AcouSort has been active in the Vinnova funded IndiCell project which aims to enable the transfer of novel stem cell treatments from research to a clinical setting. In the quarter, AcouSort finalized the application development and has installed an AcouTrap system at Karolinska Institutet (KI). The new application will be used to isolate and wash stem cells before they are used for injections. The system at KI will be used throughout the remainder of the project to automate the isolation and wash of stem cells used in the research efforts to develop new stem cell-based therapies.

INTENSE MARKETING OF THE NEW ACOUTRAP SYSTEM

In the spring of this year, AcouSort launched the third generation of the AcouTrap system – a benchtop research instrument for automated sample preparation of cells, extracellular vesicles, bacteria, and viruses. Since the launch, AcouSort has experienced a growing interest in this unique product, and at the beginning of October, AcouSort's Commercial Director Agnes Michanek travelled to the US to team up with Kelley Intehar, our Sales Director North America for an AcouTrap demo tour.

During the demo tour, visits were paid to customers interested in both cell and extracellular vesicle isolation as well as virus isolation. Even though the new AcouTrap is designed to be a dedicated research instrument, the product and its technology are fully OEM compatible. Considering the interest over the past months, we are planning further demo travels in November and December to meet up with more research groups interested in evaluating the company's unique technology.

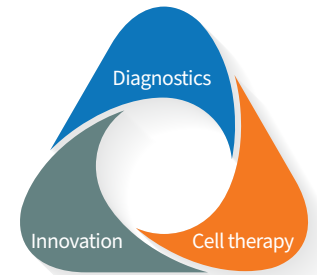

SPREADING THE WORD

AcouSort is not yet a household name in our industry, and one of our strategic initiatives is to spread the word of our company and our unique technology on the global arena. One of the most effective ways of doing this is to participate in international conferences and congresses. The past quarter was very intense also in this respect with participation in *Acoustofluidics 2023*, a conference dedicated to exploring the science, the engineering, and the use of micro and nanoscale acoustofluidics; *μTAS 2023*, an international conference on miniaturized systems for chemistry and life sciences; and the prestigious *NIH Research Festival* where we hosted a 45-minute workshop demonstrating the Company's technology in more detail.

Torsten Freltoft – CEO
ACOSORT AB

STRATEGY

Growth through research and innovation collaborations

AcouSort's technology is perfectly placed to play a critical role in the healthcare of tomorrow. Cardiovascular diseases, infections, and cancer are the three deadliest diseases in the world. There is a great need for new and effective diagnostic and cell therapeutic solutions, but current sample processing and manufacturing workflows are facing significant challenges as they rely on a number of manual sample handling processes. Manual handling often entails a high risk of errors as well as bacterial contamination during the production process of cell therapeutics. This puts a high price tag on the therapy, thereby limiting the number of patients who can be offered a potentially life-saving treatment. It is clear that the industry is in great need of inventions in order to really take off.

POTENTIAL FOR SIGNIFICANT IMPROVEMENTS IN CELL THERAPY AND DIAGNOSTICS

AcouSort's ambition is to address the challenges in cell therapy by introducing solutions that enables automated sample processing and integration to limit the need for manual handling in the manufacturing workflow. Our technology fits well in several steps in the process and has a fantastic potential to lower manufacturing cost.

Within diagnostics, our unique ability to automate and integrate sample processing steps will also allow for a new generation of medical devices. Patient samples can be analyzed directly at the point-of-care instead of at central laboratories, meaning that doctors and patients get the results immediately.

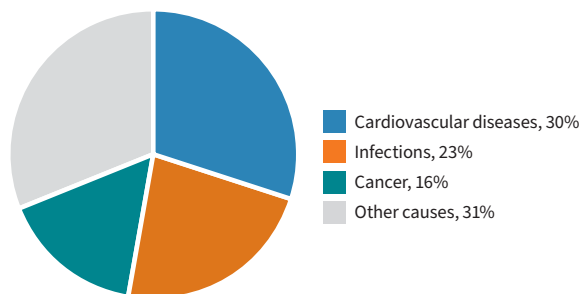

GROWTH THROUGH OUR RESEARCH-TO-OEM MODEL

AcouSort's strategy focuses on our research-to-OEM model, which has the ambition to establish continuous revenues from sales of OEM modules to large Life Science companies. By establishing multiple partnerships in the cell and gene therapy and diagnostic markets, we aim to build a network of researchers and partners for joint developments to take us to a commercially matured technology. Recent, we substantially strengthened our commercial capacity, and we are currently targeting the North American market, the European market, and selected markets in Asia. Through collaborations with leading Life Science companies our technology will eliminate manual handling steps while saving time, money, and ultimately – lives.

INNOVATION WITH GREAT POTENTIAL

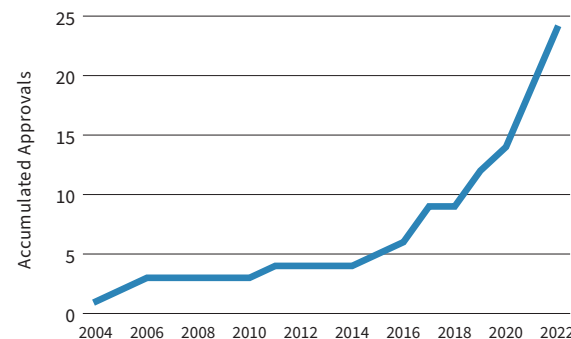

In 2022, AcouSort and a group of partners received a grant of SEK 26 million by the EIC to develop an acoustofluidic thin film actuated chip for exosome separation from blood. Exosomes are nanoparticles that enable human cells to communicate vital information with each other. Thereby, exosome separation has the potential to open a completely new field within diagnostics. Of the SEK 26 million, SEK 12.2 million go directly to AcouSort, and the remainder of the funding is distributed to AcouSort's partners Lund University, DTU, and DayOne. The project will run for 36 months and is fully funded by the EU.

Accumulated OEM projects and system placements

Advancement within point-of-care testing requires automation of sample preparation

To fight the deadliest diseases in the world – cardiovascular, infectious, and cancer diseases – while the world's population in many countries is either growing or aging, faster and more efficient diagnostics are needed. One of the most important steps towards achieving this is to move diagnostic testing closer to the patient, thus being able to act immediately on the result. For most diagnostics tests, this will require integrated and automated sample processing, and AcouSort's advanced sample preparation modules provide an optimal solution to achieve this.

Today, almost all blood tests taken in the health care system are shipped to a central hospital or other laboratory facility. There, the samples are processed, and diagnostic assays are performed. For about 75% of the blood samples processed, the sample must be centrifuged to separate the blood cells from the blood plasma that is required to perform the requested tests. To implement most of today's blood-based diagnostic tests as point-of-care tests, the required blood-plasma separation must be seamlessly integrated into the point-of-care device. Depending on the specific diagnostic assay in question, AcouSort's OEM separation modules – AcouWash, AcouPlasmaOptical and AcouTrap – are optimal solutions to this challenge.

MARKET

The current trend in diagnostic testing aims to decentralize testing enabling faster and more accurate diagnostics. To provide the use of more advanced diagnostics outside of clinical laboratories, the interest in solutions for automated sample preparation is increasing. The global point-of-care testing (POCT) market size was accounted at USD 40.6 billion in 2021 and it is expected to reach around USD 103.2 billion by 2030¹ corresponding to an average annual growth of about 11%.

OFFERING

AcouSort works with providers of point-of-care diagnostic systems to customize our OEM modules to their future or next generation systems. AcouSort's modules are designed for integration into consumable or semi-consumable cartridges that our partners design to be used in their instruments. In this way, each separation module is used only for one patient or for a limited number of patients with a thorough decontamination step in between, ensuring sample integrity. When more and more system providers integrate our separation modules into their clinical diagnostic systems, AcouSort business model is highly scalable and with a significant revenue potential.

FOCUS 2023

In 2023, AcouSort's main focus will be directed at reaching additional diagnostic customers by providing both the AcouPlasmaOptical and the AcouTrap units as evaluation test kits to simplify the evaluation process for potential customers. This expands the possibilities to reach more potential collaboration partners and speed up the initial evaluation phases. In addition to this, the 2023 plans involve addressing other diagnostic segments with the AcouPlasmaOptical module as well as to create additional marketing materials showing the value provided by AcouPlasmaOptical when it comes to speeding up measurements of plasma analytes directly in whole blood.

Activities 2023

Quarter 1

- Started development of OEM evaluation test kit for AcouTrap
- Participated at the TriCon Molecular Medicine conference in San Diego to meet potential customers within the diagnostic and liquid biopsy segment

Quarter 2

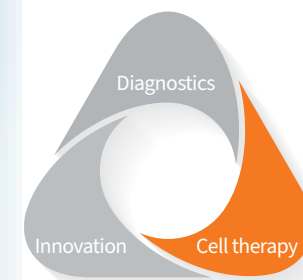

- Participated at the BIO convention 2023 in Boston to meet strategic partners interested in automated sample preparation
- Business discussions with potential OEM partners following BIO and CYTO participation
- Continued activities to finalize the AcouTrap OEM evaluation kit

Quarter 3

- First diagnostic device developed by partnering company including AcouSort's acoustofluidic technology receives FDA approval
- Several OEM evaluation kits placed at potential OEM customers

¹ <https://www.precedenceresearch.com/point-of-care-testing-market>

Automated cell processing facilitates the cell therapy revolution

The world is facing a revolutionary increase in clinically approved cell therapies during the coming years. Unfortunately, the complex and expensive manufacturing process significantly limits the access to these treatments. All major Life Science instrumentation companies have active programs targeting automation of the cell therapy processing to manage cost and quality. AcouSort's automated cell separation and processing technology is well suited for providing the solution for this democratization of novel cell therapies.

The number of clinically approved cell and gene therapies is rapidly increasing, with even more in the pipeline. The majority of new cell therapies are CAR-T cell therapies, where the patient's own cells are isolated and "trained" (genetically manipulated) to recognize cancer cells. After training and expansion, the cells are readministered to the patient where they attack and destroy the cancer cells. So far, the approved cell therapies of this type are all targeting blood cancers, but treatments for tumor-forming cancers are in the pipeline.

The reason for the currently very high cost is a combination of the need for sterile labs and the extensive manual handling required to produce the therapeutic cells. Cell therapies can have price tags of up to USD 500,000 per treatment, a price level that is prohibitive for most health insurances or public health care plans.

MARKET

The global cell therapy market size was valued at USD 21.6 billion in 2022 and is expected to expand at a compound annual growth rate (CAGR) of 14.15% from 2023 to 2030¹, thus exceeding USD 60 billion in 2030. The market is constantly growing to include new cell types, which presents a significant opportunity for companies to strengthen their market positions. As a result, during the past few years, there has been a dramatic increase in the number of companies engaged in the development of cell therapies.

OFFERING

AcouSort has been approached by a handful of multinational Life Science companies seeking solutions to enclose and automate the cell therapeutics processing and eliminate the current manual processing. Our separation modules are well suited for this as they can automatically perform the cell wash, cell up-concentrations and separation of target cell types needed.

AcouSort's strategy is to develop and supply the automated cell processing modules as single use OEM components to our Life Science instrumentation partners. In this way, the AcouSort business model is both scalable and represents a significant revenue potential.

FOCUS 2023

In 2023, AcouSort will continue to develop and market our cell wash, cell separation and cell up-concentration applications for automation of cell therapy sample preparation. An important part is the technical development of high throughput units followed by the development of new marketing materials highlighting the benefits of these high throughput units. With more data and ready applications, we are aiming to intensify our market outreach during the second half of the year to interact with more potential partners active in the field of cell therapy development.

Activities 2023

Quarter 1

- Continued optimization of volume throughput of the acoustic separation modules together with one of the major players in the cell therapy field
- Finalized the development of the stem cell isolation system prototype adapted to fit into the workflow for stem cell isolation
- Continued the development of applications for cell wash of frozen stem cells

Quarter 2

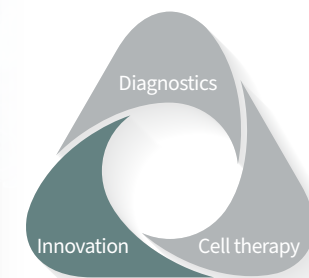

- Finalized throughput optimization project together with major player in the cell therapy field
- Continued development of high throughput cell separation cartridge
- Finalized application development of cell wash for frozen stem cells
- Participated in the event on Acoustic Technology Applications in Cell Processing in Paris

Quarter 3

- Two cell therapy-related applications using AcouSort's technology selected for poster presentations at the μ TAS conference
- Test system for automated cell processing within cell therapy delivered to partner company for continued internal product development
- High-throughput cell wash application developed to support cell therapy workflows

Driving the development and exploitation of automated sample processing

Through partnerships with leading universities and through our Research and Innovation platforms – AcouWash and AcouTrap – AcouSort strives to continue driving the innovation of acoustofluidics for automated sample preparation and processing. Our innovation projects are to a large extent funded through public contributions from EIC/EU and from Vinnova.

AcouSort is constantly interacting with current and potential partners and customers through meetings and active participation in scientific conferences and tradeshows. The feedback from these interactions is used to direct our Research and Innovation activities.

COMMERCIAL RESEARCH AND INNOVATION PLATFORMS

To enable the development of new or improved applications of our automated sample processing technology, we have developed two benchtop Research and Innovation platforms, the AcouWash and the AcouTrap. We provide these systems to researchers and key opinion leaders at universities and to our OEM collaboration partners in the Life Science industry. Through our academic research partners and their publications and presentations, we distribute information about our technology and its applications. And through the collaboration with the OEM partners, the systems enable access to the automated sample processing modules at a very early stage in their technical assay or system development process. The use of our Research and Innovation platforms by key opinion leaders contributes to broaden the application fields of the technology while promoting the use of our technology in general through their scientific publications.

THE ACOUSOME PROJECT

The AcouSome project is a fully funded EU transition project with two main commercial innovation goals. The most fundamental

goal is to replace the currently glass-based and bulk piezo activated separation modules with modules made in plastic. If successful, this innovation will significantly reduce the production price of our separation modules, paving the way for single use applications of these in point-of-care diagnostics. However, the project also has the goal of developing a robust and simple-to-use device for isolating extracellular vesicles from whole blood samples.

The AcouSome project is funded 100% by the European Innovation Council (EIC) with EUR 2.5 million over 36 months (2023-2025). Our partners in this project are the Technical University of Denmark, Lund University and DayOne.

FOCUS 2023

The AcouSome project officially started January 1, 2023, and during the first year the initial focus is to identify and mitigate the largest challenges in the project as well as to secure efficient and rapid prototyping of the new polymer-based components.

Focus for the AcouWash and AcouTrap Research and Innovation platforms in 2023 include completing and launching the new AcouTrap 3 system including both an enhanced standard trapping unit as well as a trapping unit featuring a 3-5 fold increase in cell capacity. Commercial activities related to the platforms will be intensified, especially in North America where we recently increased our presence by manning our US subsidiary, AcouSort, Inc.

Activities 2023

Quarter 1

- Finalized the AcouPlast project showing the first proof of principle for acoustic separation of blood samples in polymer chips
- Initiated the AcouSome project
- Developed a medium-sized trapping unit with increased capacity to target more cell trapping applications
- Continued the development of new chip designs to enable high throughput separations

Quarter 2

- AcouWash system sold to prominent research group at NIH working with cancer diagnostics
- AcouWash system sold to Lund University for circulating tumor cell project
- Initiated collaboration project with flow cytometry company to evaluate AcouWash technology for sample purification
- Completed the first milestone in the AcouSome project – benchmark testing of our current separation and trapping platforms
- Launch of new AcouTrap 3 system and medium-sized trapping unit with increased capacity for cell applications
- Recruited Henrik Johansson as Director for Research and Technology

Quarter 3

- Delivery of an AcouTrap system to Karolinska Institutet to be used for washing of frozen stem cells within the IndiCell project
- Significant progress within the AcouSome project related to the usability of thin films
- Conference participations in Europe and USA combined with several demonstrations with the new and improved AcouTrap 3 system
- Invited lecture at the Acoustofluidics conference

An overview of AcouSort's research collaborations

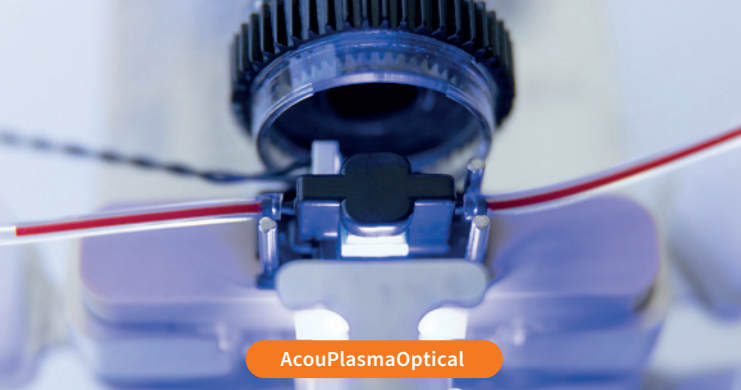

Sound is created when a vibration generates pressure waves that propagate through a medium. When the wave encounters a particle, the particle is moved by the acoustic forces generated by the wave. In acoustofluidics, the technology used by AcouSort, ultrasound is used to create standing acoustic waves in microfluidic channels. The standing wave typically focuses the particles

toward the pressure node, where the pressure variation is the lowest. The sound frequency is similar to diagnostic ultrasound and has been shown to be very gentle to biological samples, with no activation or decrease in viability. Acoustofluidics can be implemented in two different ways, acoustic separation, and acoustic trapping.

To stay at the forefront, AcouSort is continuously developing the acoustofluidic technology further together with universities and commercial partners.

Project	Sponsor	Goal	Partners	Duration	Status	AcouSort grant	Total project grant
AcouSome	European Innovation Council	Development of a miniaturized microfluidic module for exosome isolation directly from blood using ultrasound generated by thin films, to be used in research and diagnostics.	Lund University, DTU, DayOne	2023-2025	Ongoing	EUR 1,100,000	EUR 2,500,000
IndiCell	Vinnova	Development of a world leading innovation milieu for individualized induced pluripotent stem cell derived therapies, to lower the risks and overcome hurdles for the translation from basic science to innovations and further to clinical applications.	Lund University, Karolinska Institute, KTH, Lab-On-A-Bead AB, Skåne University Hospital, BioLamina AB, Karolinska University Hospital	2021-2026	Ongoing	EUR 110,000	EUR 3,520,000*
Blue4Therapy	Eureka, Vinnova, Innovation Fund Denmark	Development of a platform for specific stem cell isolation from autologous adipose tissue for effective regenerative therapy, together with universities and commercial partners.	Blue Cell Therapeutics, University of Southern Denmark, Novozymes A/S	2020-2023	Completed April 2023	EUR 300,000	EUR 800,000
AcouPlast	Eureka, Vinnova, Innovation Fund Denmark	Development of polymer chips to make acoustic separation even more cost efficient and easy to integrate into diagnostic and analytical systems.	DTU, Ortofon A/S, Lund University	2019-2023	Completed Mar 2023	EUR 400,000	EUR 1,000,000
BioWings	EU Horizon 2020	Development of thin films generating the ultrasound used for cell processing to make acoustofluidic chips more efficient and easier to manufacture.	Weizmann Institute of Science, EPFL, PIEMACS, DTU, Lund Univeristy	2018-2022	Completed Nov 2022	EUR 180,000	EUR 3,000,000

AcouPlasmaOptical

AcouTrap

AcouWash

AcouSort's products

OEM COMPONENTS

AcouSort's main strategy is to develop and commercialize Original Equipment Manufacturer (OEM) components for sample preparation and processing. The OEM solutions enable integration of our technology into analytical, diagnostic, and therapeutic systems, providing automated sample preparation. The customer base for the OEM components are instrument manufacturers within the Life Science industry.

AcouSort intends to expand the portfolio of OEM components to cover a wide range of applications for clinical analysis and handling of biological samples. The Company expects the acoustic separation components to be critical components, essential for development of novel point-of-care testing devices where access to blood plasma or other fractions of blood is required. This also applies for biological sample processing systems in therapeutic settings for e.g., personalized medicine.

AcouPlasmaOptical

Integrated blood plasma separation. AcouPlasmaOptical is an OEM component designed for integration into diagnostic instruments as a semi-consumable. It enables automated and rapid access to plasma for optical measurements of blood analytes in point-of-care diagnostic devices. The technology uses gentle acoustic forces in combination with microfluidics to create a plasma window for optical access in whole blood samples without the need for prior centrifugation. Centrifugation often requires manual intervention that may have negative effects on sample quality, making AcouPlasmaOptical a competitive alternative.

Custom made solutions for interfacing of sample flow and electronic connection are available. Production of AcouPlasmaOptical is ISO13485 certified.

AcouSort offers evaluation kits to partners interested in exploring integration of the component into their systems.

RESEARCH AND INNOVATION SYSTEMS

AcouSort has developed two benchtop systems, the AcouTrap and the AcouWash, to offer the Company's core acoustofluidic techniques, i.e., trapping and separation techniques, in an easy-to-use format. The instruments serve as Research and Innovation platforms, providing easy access to the technology for instrument manufacturers interested in integrating acoustofluidic OEM components into their systems. With user-friendly hardware and software, the instruments enable automated handling of biological samples, supporting academic researchers and product development teams working with new biomarker identification and diagnostic assay development.

AcouTrap

Handling of cells and extracellular vesicles. AcouTrap is a benchtop research instrument for automated enrichment, washing and staining of biological samples. AcouTrap provides a solution for gentle and rapid sample preparation of biological particles of various sizes. The AcouTrap system is excellent for sample preparation of precious cell samples, where traditional methods are ill-suited as they can dramatically decrease recovery and viability. The AcouTrap efficiently automate common sample preparation

steps such as up-concentration, high recovery washing and labelling of low cell number samples. The system also facilitates handling of nanoparticles, including bacteria, viruses, and extracellular vesicles. These particles are very small, often less than one micrometer in size, and are found in complex biological liquids such as blood plasma. The small size and the complexity of the liquid makes isolation through conventional techniques challenging. With AcouTrap, isolation is automated and manages samples with smaller volumes than the competing technologies. This enables research studies with biobank samples that often contain minute fluid volumes.

AcouWash

Automated cell separation. AcouWash is a benchtop research instrument for label-free separation of target cells from a variety of sample types. The system provides automated processing and is designed to perform sensitive separations and handle fragile cells without any impact on viability. The acoustic forces used in the AcouWash provides samples with very high quality and with minimal sample to sample variation.

With the AcouWash system, a variety of applications aimed at separation of blood cells can be automated. Common applications comprise gentle and highly efficient cell wash, label-free separation of mononuclear cells from whole blood, isolation of platelets, rare cell isolation (e.g., circulating tumor cell, CTC) as well as blood-plasma separation for diagnostic applications.

Operating results

For the third quarter of the year AcouSort Group reported net sales of SEK 1,121,000 (326,000) which consisted of product sales of SEK 553,000 (226,000) and customer projects of SEK 568,000 (100,000). Other operating income consists of grants amounting to SEK 1,039,000 (999,000).

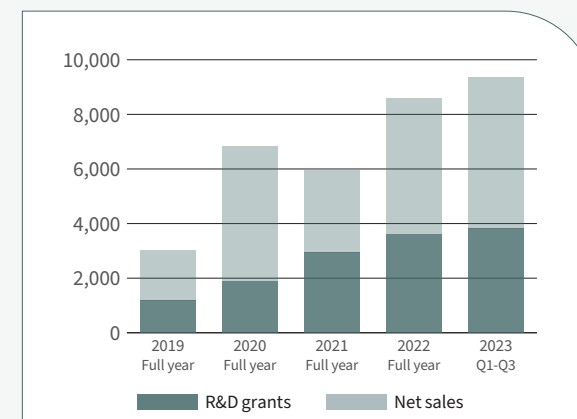

Raw materials amounted to SEK -372,000 (-494,000). Other external expenses amounted to SEK -983,000 (-1,873,000).

Personnel costs amounted to SEK -4,769,000 (-2,901,000).

Depreciation amounted to SEK -142,000 (-306,000).

For the third quarter of the year AcouSort Group's operating result totalled SEK -4,106,000 (-4,249,000).

Total income, SEK thousand

AcouSort has been successful in applying for public R&D grants within Sweden and the EU. In total over the past four years, AcouSort has been awarded EUR 2.2 million corresponding to almost SEK 25 million in research and development grants. This, together with a positive sales trend, has limited the need to raise additional capital from the company's owners.

Cash flow and investments

AcouSort Group's cash flow for the third quarter of the year was SEK -5,401,000 (-4,480,000). Investments amounted to SEK -142,000 (-85,000), of which SEK -142,000 (0) pertained to intangible assets and SEK 0 (-85,000) to tangible assets.

In December 2022, the Company received cash and cash equivalents from EIC, where SEK 11,272 thousand would accrue to our project partners. At year-end, this amount was recognized as current liability, an amount that was then settled in Q1 2023. Hence the significant amount that arises during the reduction of current liabilities during the year (SEK -14,999 thousand).

Cash and cash equivalents last five quarters, SEK thousand

At the end of the third quarter, the group had cash and cash equivalents amounting to SEK 6,550,000, a fund that allows us to complete our current plans during quarter 4 2023.

Other information

THE SHARE

AcouSort's share was listed on Spotlight Stock Market January 9th, 2017. In December 2020 the share changed list to Nasdaq First North Growth Market, with December 14th as the first trading day. The ticker symbol of the share is "ACOU", and the ISIN-code is SE0009189608. First North Growth Market is an alternative marketplace run by NASDAQ OMX GROUP. Companies traded on First North Growth Market do not have to be compliant to the same rules as companies traded on a regulated market. Instead, the companies follow under less strict rules applied for growth companies. The risk of investing in a company traded on First North Growth Market may thus be greater than investing in a company traded on a regulated market. All companies with shares traded on First North Growth Market have a Certified Adviser that supervises the compliance of the rules. The stock exchange examines applications to be listed on the exchange. AcouSort's Certified Adviser on Nasdaq First North Growth Market is Erik Penser Bank AB, +46 8 463 80 00. As of September 30, 2023, the number of shares in AcouSort AB was 13,202,285. The Company has one class of shares. Each share carries one (1) vote per share and carries equal rights to share in the Company's assets and earnings.

THE SUBSIDIARY ACOUSORT INC

AcouSort AB has a wholly owned subsidiary in the USA, AcouSort Inc. The Company's task is to carry out marketing and sales on the North American market.

BUSINESS-RELATED RISKS AND UNCERTAINTIES

In summary, the risks and uncertainties that AcouSort's operations are exposed to are related to, among other things, competition, technology development, market conditions, capital needs, currencies and interest rates. No significant changes in risk or uncertainty factors occurred during the current period. For more detailed reporting of risks and uncertainties, please refer to the Annual Report.

The Group conducts continuous simulations of expected liquidity development for the coming twelve-month period. These simulations are based on the current order backlog, ongoing EU-funded R&D projects, planned investments as well as operating costs. The Group's simulations show that the Group does not have sufficient liquidity for the coming twelve-month period without raising capital. Therefore, the Group has decided to carry out a new share issue.

In a course of events where the Group would not receive a satisfactory subscription for the issue, this could mean that the Group would have liquidity problems. This means that the liquidity trend constitutes a significant uncertainty factor regarding the Group's continued operations. It is the Group's current assessment that such a situation can be managed by carrying out the planned share issue.
